

ERP Implementation for Leading Product Manufacturer Catering to Government-led Organizations

| **About the Client**

Industry leaders in designing, manufacturing, and supplying top-of-the-line products for mainline railways, metro rail, aerospace, and defense applications. Having multiple units in different cities of India manufacturing different equipment and movement of components, assemblies between entities.

| **Gap Analysis**

The client was working on in-house developed customized software using manual registers and excel sheets having limited functionality, upgrade and maintenance issues, training issues, etc. Also, the client was facing compliances issues related to the localization of the software.

When the client decided it was time to reinforce its ERP initiative in order to continue satisfying increasing customer demands in terms of lead time, it began by looking at how to streamline all of its business processes. After scrutinizing all process areas client chose to leverage its investment and rely on Infor LN ERP. Infor's product extended the requisite visibility across the organization with additional functionality. With named user licenses, the client has incorporated modules of Infor ERP LN across the company that includes financials, taxation, enterprise planning, order management, electronic commerce, central invoicing, manufacturing, and warehouse management.

| Project Requirement

Infor LN smooth implementation was one of the biggest challenges as each product that the client manufactured for its customers was unique, requiring varying amounts of time to complete. Therefore, to understand and streamline the entire channel was crucial along with right visibility to achieve the designated deadlines.

| Solution Offered

Apptread took over the implementation of the updated Infor solution, including all customer-requested user training, which occurred without serious challenges within six months as part of the Infor rapid implementation program, designed to deliver rapid, predictable implementations at a lower cost. The implementation included predefined business roles and business process templates focused on key user functions and processes that are common across manufacturing.

This Infor LN ERP implementation gave the client flexibility and integration features that helped them scale their business and fully utilize the platform to achieve the best results.

Apptread's customized implementation solution, helped the client to create individual user dashboard to provide a complete field of view on product status to appropriately meet production deadline, including managing additional shifts hours.

| Results Achieved

Infor LN smooth implementation was one of the biggest challenges as each product that the client manufactured for its customers was unique, requiring varying amounts of time to complete. Therefore, to understand and streamline the entire channel was crucial along with right visibility to achieve the designated deadlines.

| Benefits

After Implementing different modules of LN ERP including finance in systematic approach following objectives were achieved:

- Better control and visibility of on hand inventory which helped in reducing cost
- Better control for sending material from one company to other companies
- Dashboard reports immediately available for top management
- Centralized control over all the business processes
- Flexibility to use selected modules in selected companies
- Centralized support for Upgradation, maintenance, patch management
- Control over released Bill Over Material and DCN (Drawing change Note)
- Tight control over Integration of different Modules
- Easy Localization to Implement and better third party Integration
